SUMMARY

B.Tech Computer Science & Engineering student at JIIT with hands-on experience in AWS cloud deployments (EC2, S3, RDS). Strong problem solver on LeetCode with solid foundations in database internals (DBMS), operating systems, and object-oriented programming.

EDUCATION

Jaypee Institute of Information Technology — **Graduation: May 2027**
Bachelor of Technology (B.Tech) in Computer Science & Engineering — *CGPA: 6.53 / 10.0*

Senior Secondary School (Class XII) — **Year: 2021**
Central Board of Secondary Education (CBSE) — *Percentage: 91.2%*

High School (Class X) — **Year: 2019**
Central Board of Secondary Education (CBSE) — *Percentage: 90.5%*

TECHNICAL SKILLS

Languages	C++, JavaScript, SQL, HTML5/CSS3
Web & Backend	Node.js, Express.js, React, Next.js, MongoDB, Mongoose, REST APIs, JWT Authentication
Cloud Services (AWS)	EC2, S3, Auto Scaling Group (ASG), VPC, IAM, RDS, ElastiCache
CS Fundamentals	Database Management Systems (DBMS), Operating Systems (OS), Object-Oriented Programming (OOPs)
Developer Tools	Git, GitHub, Render (Hosting), Cloudinary, Three.js, WebGL

PROJECTS

StreamTweet – Video & Social Media Platform | Next.js, Express.js, MongoDB, Cloudinary — GitHub | Live Link

- Built a full-stack platform combining YouTube-style video sharing with Twitter-style short updates using **Next.js, Express.js, MongoDB, and Cloudinary**.
- Developed a **REST API with 49 endpoints** for users, videos, tweets, comments, replies, likes, playlists, and subscriptions.
- Implemented **JWT authentication** (access and refresh tokens), bcrypt password hashing, and owner-only edit/delete permissions.
- Wrote **MongoDB aggregation pipelines** (*$lookup, $group, $graphLookup*) for channel stats, watch history, and liked videos.
- Built threaded replies with cascading delete of nested replies, plus a paginated global feed and subscribe/unsubscribe.
- Added video and image upload with Cloudinary, search, sorting, and publish/unpublish; deployed frontend and backend as two services on Render using a Blueprint (*render.yaml*).

NEXUS // DBMS – Database Visualizer | Three.js, WebGL, JavaScript, CSS — Live Link

- Built an interactive 3D dashboard that shows how a database works behind the scenes, using **Three.js** and **JavaScript**.
- Showed how a database plans and runs a **query** step by step, with moving data particles and cache hit/miss status.
- Created a 3D **index playground** where users can add, delete, and search keys and watch the index tree grow and split.
- Simulated how a database lets many users work at once, using locks and a log of every change.
- Showed how a database keeps recent data in memory and removes old data using simple rules like FIFO and LRU.
- Added **automatic data splitting** across servers, creating a new split when one gets too full.
- Showed how data is copied across servers and how reading and writing can be handled separately.
- Added drag-and-drop for CSV, JSON, and SQL files so users can load their own data.

TRAINING & CERTIFICATIONS

- **Data Structures & Algorithms (Coding Ninjas):** Completed extensive course in problem-solving paradigms, algorithm complexity, trees, graphs, sorting, and dynamic programming.
- **Full-Stack Web Development (Udemy):** Hands-on training building end-to-end full-stack architectures, API routes, database structures, and dynamic web applications.
- **LeetCode Profile:** Solved algorithmic problems on arrays, string manipulation, trees, and hashing, focusing on complexity optimization.
